

HRMTEC ribbon printing system now prints with shadow

Ribbon printing system of HRMTEC solves the shadow printing problem with unsurpassed printing quality

Wettswil – September 4, 2016

HRMTEC succeed to print shadows with its ribbon printing system. What has not seemed possible, and the systems of competitors to this day cannot, HRMTEC now succeeded.

"With the development of the high quality shadow technology we made a major leap forward," says HRMTEC Creative Director Markus Hamm. "Although our ribbon printing system generates unrivaled printing quality, some customers still want the possibility of shadow printing," says Hamm. "This is now solved and our digital stamping machine can now also print shadows. And even better, the shades can be set and varied according to demand, which further emphasizes the effect of the shadows," Hamm explains.

"While the competition – such as Erco – still investigates and searches a solution of the shadow printing problem, HRMTEC provides the solution already today", notes HRMTEC Managing Director Roland Mueller. "Once again, we are ahead of the competition by lengths and reaffirm our position as the leader in stamping realistic digital ribbon printing," says Mueller further.

HRMTEC offers with its stamping realistic digital ribbon printing system not only the system with the outstanding print quality including shadow printing, but offers customers the complete ribbon printing portfolio of products to services. Everything from one source, and to have only one contact, many customers see as a great advantage.
