

HRMTEC ribbon printing system prints all common ribbons

Ribbon printing system of HRMTEC prints all ribbon materials with high printing quality

Wettswil – September 12, 2016

The ribbon printing system of HRMTEC succeeds to print all common ribbon materials. Representatives of one of the largest ribbon manufacturer in Germany, Krahn & Gobbers GmbH (<http://www.kragoart.de>) tested the ribbon printing system of HRMTEC with their material.

„Until now, customers who wanted to print different ribbon materials were having multiple printing systems“, said HRMTEC Creative Director Markus Hamm. „Some customers have preferences for Moiré instead of Super Satin“, explains Hamm. „Our stamping machine allows printing all standard ribbon materials with one single system only. We recently had representatives from Krahn & Gobbers GmbH in the factory, which tested their various ribbon materials with the 123 „Schleifenprofi“ ribbon printing system. And we were able to print all ribbon materials of Krago, either moiré, satin or Super Satin“, explains Hamm further.

„Even the Krago representatives were surprised that our stamping machine could print all ribbons brought by them“, stated HRMTEC Managing Director Roland Mueller. „For the first time customers have a stamping realistic computerized ribbon printing system, which prints all common ribbon materials“, said Mueller further.

HRMTEC offers with its ribbon printing system very good printing quality for all common ribbon materials, including shadow printing, and low printing costs, and also the complete ribbon printing portfolio of products to services.
